

US EPA Progress Update- Sutton Brook Disposal Area Superfund Site

July 23, 2014

Newly updated Site information, shows that due to a schedule/planning issue, there will actually be a delivery to the site this weekend (it will be a total of 3 trucks). Although it involves a very small number of deliveries, this amended update is being provide because the July 22 update clearly stated that there would not be weekend deliveries. The reason for the deliveries this weekend is to provide clay material for the slurry wall contractor (the “specialty sub-contractor”) who would need to stop work without it. The material is coming from Wyoming, so there is a significant lead time.

The practice of a weekend delivery could possibly happen again, though it is not anticipated or planned. However, if it does occur, it would only be for a similar unique situation, involving a very limited number of vehicles. In addition, advance notification will be provided if at all possible.
